

Sarthak Ahuja

CONTACT INFORMATION	TF09, IBM India Research Lab New Delhi 110070, India	sarthakahuja.org sarthakahuja@outlook.com
EDUCATION	Indraprastha Institute of Information Technology , Delhi Bachelor of Technology (Honors), Computer Science, August 2016 Apeejay School , Pitampura, New Delhi Senior School, Science, CBSE, May 2012 High School CBSE, May 2010	CGPA: 9.1 93.2% 95.0%
EXPERIENCE	Software Engineer (Research), IBM Research Member of the Collaborative Cognition group (earlier known as Analytics and Optimization), working on the machine learning and collaborative decision making component of IBM Watson Recruitment. Research Associate, PreCog Research Group, IIIT-Delhi Led the work on patch based visual summarization of world events on social media - #VisualHashtags; Contributed as a Software Developer on Project-O, Precog's social media analytics platform. Research Intern, Infosys Center for AI, IIIT-Delhi Explored modern SLAM algorithms and built systems for visual positioning and navigation in wearable cameras and vehicle dashboard cameras; Core member of IIIT-Delhi's Autonomous Car Team - Swarath. Led the development of the perception module and the test suite. Head, Product(Web), Meri Awaaz	July 2016 onwards May 2016 to July 2016 December 2014 to May 2016 September 2014 to August 2016
WORKSHOPS	International Institute of Information Technology , Hyderabad Summer School, Deep Learning in Computer Vision	July 2016
SELECTED PROJECTS	Cogniculture Exploring socio-cognitive systems capable of acquiring and demonstrating cultural awareness and adaptability skills necessary to self-sustain, survive and evolve alongside human counterparts. IBM Watson Recruitment Developing the cognitive component of IBM's recruitment offering; Increasing hiring efficiency by predicting the probability of success of a prospective candidates using features mined from requisitions and resumes; Developing a collaborative decision making pipeline to resolve candidate preference among various stake holders/cognitive agents through sequential game play. #VisualHashtags Formulated a novel method for visual summarization of social media events in the form of images patches; Proposed system incorporates a multi-stage filtering process and social popularity based ranking to achieve improved coverage on politics and sports datasets. Visual Odometry based Driver Assistance System Built a navigation system to carry out robust visual positioning for a car by using a generated odometry on encountering an erratic GPS signal; Built the apparatus for the dashcam using a point grey camera and an intel NUC running an implementation of the LSD-SLAM algorithm. Distress Detection Created an android application that uses a two-stage supervised learning algorithm to robustly detect audio based distress activity in multiple urban contexts; Developed a web dashboard to monitor the generated alarms and employ online learning to reduce false alarms by mining occurrence patterns. Multi-Sensor Data Fusion for Human Activity Recognition Created a system to perform data fusion between two approaches for human activity detection, accelerometers and egocentric cameras, to improve the overall performance of the system. Multi-Agent Path Planning(MAPP) for Warehouse Butlers Implemented the MAPP Algorithm by Ko-Hsin Cindy Wang and Adi Botea in a warehouse simulation to identify potential points of failure in warehouse layouts, affecting the quality of the service. Kinect Driven 2D Mesh Animation with OpenGL Created an application in QT to animate a 2D mesh character and drive its actions through a kinect; Explored automatic rigging and skin deformation algorithms.	Jan 2017 onwards July 2016 onwards May 2016 to May 2017 January 2015 to May 2016 August 2014 to July 2015 August 2015 to November 2015 August 2015 to November 2015 August 2015 to November 2015
